

## Overview of Trademark Class 1

A comprehensive guide to Class 1 of the Trademark Classification. Trademarks must be applied or registered under classes and each class represents a distinct class of goods or services. We comprehensively cover the goods which fall under Class 1 of trademark classification.

### Trademark Class 1

**The following goods are classified under Class 1:** Chemicals used in industry, science and photography, as well as in agriculture, horticulture and forestry; unprocessed artificial resins, unprocessed plastics; manures; fire extinguishing compositions; tempering and soldering preparations; chemical substances for preserving foodstuffs; tanning substances; adhesives used in industry.

Class 1 includes mainly chemical products used in industry, science and agriculture, including those which go to the making of products belonging to other classes. This Class includes in particular, compost, salt for preserving other than for foodstuffs and certain additives for the food industry.

**The following goods must NOT be classified under Class 1:** raw natural resins, chemical products for use in medical science, fungicides, herbicides and preparations for destroying vermin, adhesives for stationery or household purposes, salt for preserving foodstuffs and straw mulch.
